Rescue Tool

WHEN SECONDS
COUNT!

The Victorinox Rescue Tool was developed and perfected over 5-years in close collaboration with rescue- and safety services.

A functional window breaker, an effective, well tested windshield / windscreen saw and a practical seatbelt cutter are ready for use within seconds! The tool can be used with and without gloves.

When opened, the large lock blade and powerful screwdriver (crate opener) are automatically locked into place with the liner lock system. Glass breaker and shatterproof glass saw can be replaced.

A professional tool for the Army, Police, Firebrigade, Rescue- and Security services.

THE SOLDIER'S KNIFE

FROM HUMBLE BEGINNINGS IN IBACH-SCHWYZ IN SWITZERLAND, VICTORINOX' PIONEERING SPIRIT AND ITS LEGENDARY SWISS ARMY KNIFE HAVE DEVELOPED INTO A GLOBAL BRAND, RENOWNED FOR TRADITION, QUALITY, INNOVATION AND ICONIC DESIGN.

Switzerland, 1884.

Poverty and unemployment dominate life. Many people have no option but to emigrate. In these circumstances, embarking on any new venture demands immense courage and perseverance. Against this difficult economic backdrop, Karl Elsener opens a cutler's workshop in Ibach-Schwyz (Switzerland), actively supported by his mother Victoria.

Elsener has a clear vision: to build up a prosperous company and create jobs. In 1891, he founds the Association of Swiss Master Cutlers. Together with 27 associates, he applies for a contract to manufacture knives for the Swiss Army. However, he soon suffers a bitter setback when his co-applicants give up after an industrial enterprise in Solingen (Germany) puts in a much cheaper bid. Elsener presses on and ultimately wins

the contract – but loses the money he had invested. Relatives come to his aid in this time of dire need, gaining a debt moratorium and averting bankruptcy. Later, following the success of his Officer's Knife, Elsener voluntarily reimbursed all his creditors with interest and compound interest.

The impressive story of the very early days continues to shape the company today. A feeling of solidarity, strong ties with its country of origin and adherence to strong values are the foundations upon which Victorinox is built.

Resounding success of the Swiss Officer's and Sports Knife

The Soldier's Knife issued during this era is very strong but also very heavy. Consequently, Elsener develops a lighter, more elegant and even more versatile knife

for officers. This new pocket knife model with just two springs for six tools is named the Officer's and Sports Knife. He patents the design on June 12, 1897.

Unlike the Soldier's Knife, the Officer's Knife (now known as the Swiss Army Knife) did not officially become part of the kit carried by the Swiss Army. However, that did not impact on its success. Sales reached a new high after the Second World War, with the PX shops of the U.S. Army, Marines and Air Force selling large volumes of the Swiss Army Knife to soldiers stationed in Europe. From that point on, the knife's global reputation and the demand for it rocketed.
