# Rayzone Group

At Rayzone Group, we specialize in delivering innovative and advanced cyber intelligence solutions designed to provide your organization with precise data and actionable intelligence. Using our solutions, you can make well-informed decisions that drive impactful results and give your organization data clarity and security.

Our modular solutions are tailored to meet the unique challenges of each organization. By aligning our expertise with your specific needs, we help tackle complex issues effectively and seize opportunities in a dynamic and evolving landscape.

**Don't just gather data.  
Gain insights and call for action!**

## Our Data Verticals

Our modular approach addresses the complexities of data collection by focusing on three main verticals. We harness the power of AI to fuse relevant data sources with the organization's infrastructure and knowledge centers to deliver a single pane of glass solution that empowers informed decision-making.

***Geo-Data Intelligence***

***OSINT-Data Intelligence***

***Proximity-Data Intelligence***

***Data  
Fusion***

## ***Geo-Data Intelligence***

Our Geo-Data intelligence leverages advanced core location technologies, spanning across SS7, open sources, precise locations, ADINT, satellite data and more, based on AI analytics.

Our solution is designed to seamlessly adapt to any operational challenge, delivering precision, flexibility, and effectively addressing your organization's diverse needs.

## ***OSINT-Data Intelligence***

The OSINT-Data intelligence combines an array of sensors and data sources, fused together into unified investigation platform.

Our solution addresses the full intelligence cycle, from mass data collection to precise profiling and reporting from all layers of the web, including Surface, Deep and Dark web.

## ***Proximity-Data Intelligence***

Field operations require extensive experience and expertise. We provide a comprehensive last mile, operational solution, able to effectively manage SIGINT tasks on site.

- Proximity data collection – allows for tactical interception and operations on 2G,3G,4G and 5G networks.
- Proximity data protection – focuses on on-site protection of secure facilities using RF interception to alert and mitigate nearby threats in real time.

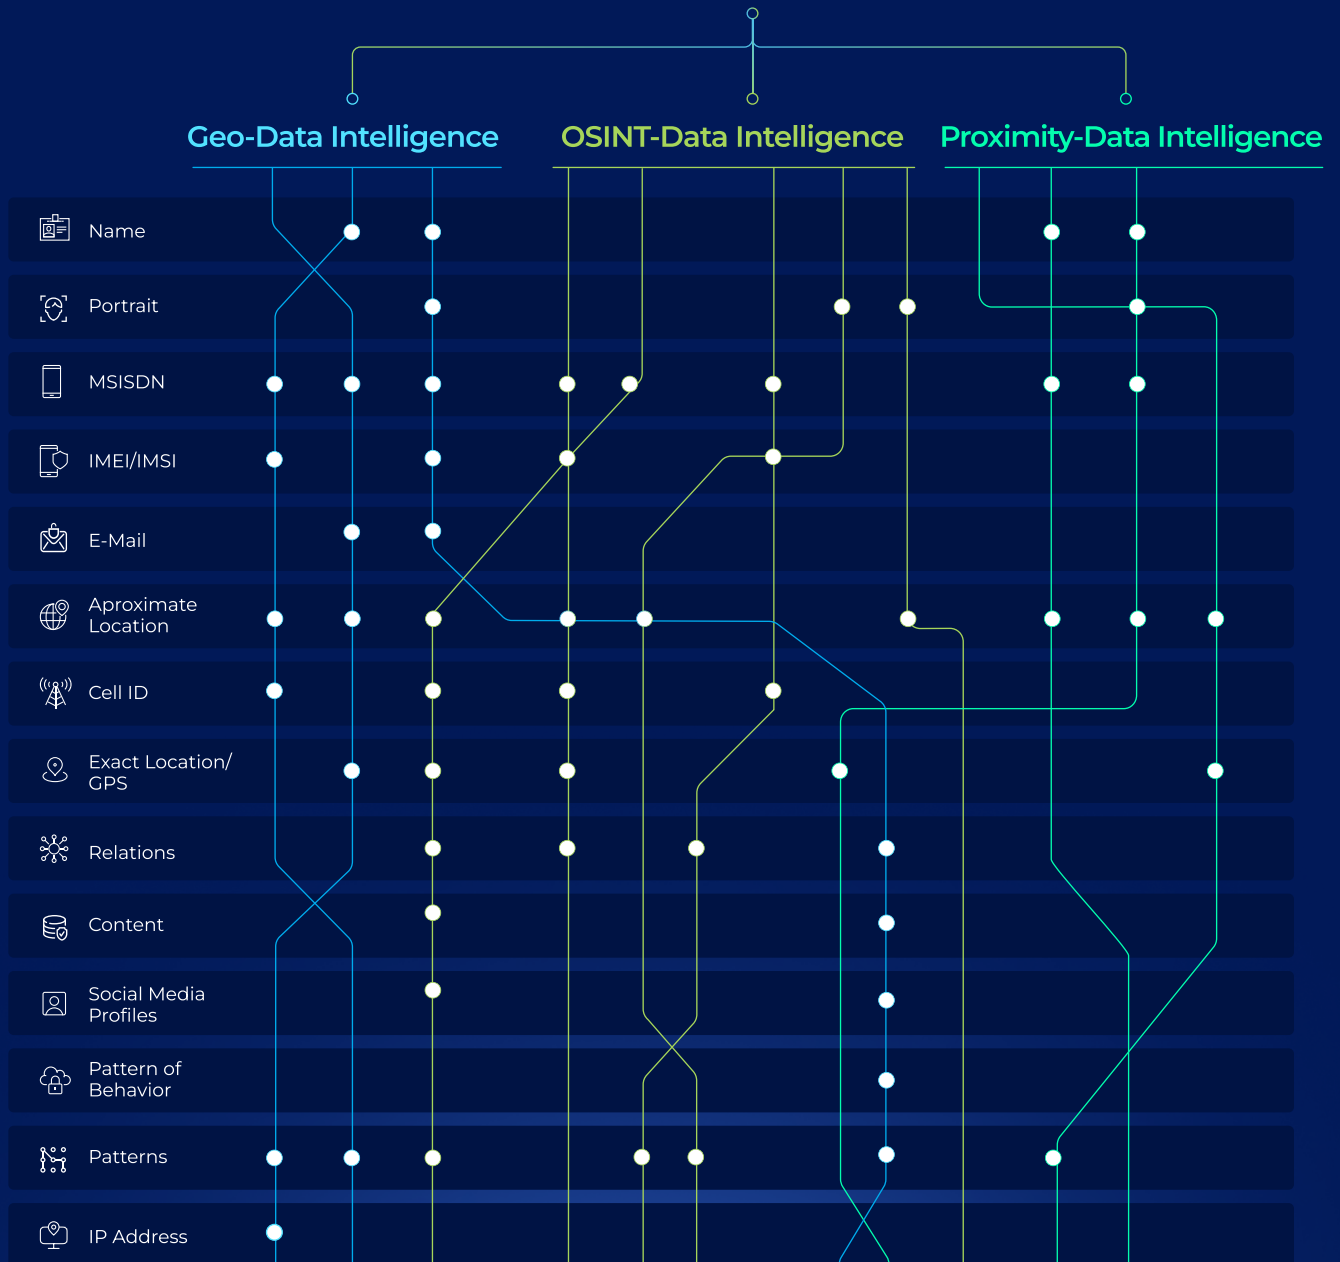

## ***The Power of Fusion***

After aligning the relevant data sources with the organization's needs, we deliver a holistic approach through advanced data fusion projects. These projects include full turnkey solutions and additional data sources such as forensic investigation tools, GEOINT, OSINT, SIGINT, internal data, mobile data and maritime AIS, ensuring a seamless and robust intelligence framework.

Combining the customer's existing data sets and Rayzone Group's data modules with powerful AI-driven insights and alerting mechanisms, we optimize the intelligence cycle to maximal efficiency.
