IHSE Achieves Its First NATO Information Assurance Product Catalogue (NIAPC) Approved Products

Oberteuringen, April 17, 2025: We are proud to announce that IHSE achieved its first NIAPC approved products with its Secure Isolated KVM extenders, certified to Common Criteria EAL4+.

The Secure 487/497 extenders were developed with internal military grade isolators to combat most known attack vectors and offer the highest level of protection for all NATO data classifications.

“Being listed in the NATO Catalogue is a significant milestone for IHSE. It underscores our dedication to delivering secure, high-performance solutions that meet the rigorous standards of NATO and its allied forces. This recognition strengthens our position as a trusted partner in global defense and security,” said Michael Spatny, CEO of IHSE GmbH.

This family of extenders is the first of a line of products including the forthcoming EAL4+ matrixes intended for full multi-class/multi domain operation. Trusted by defense, government, and critical infrastructure sectors, IHSE continues to lead in secure KVM technology.
