OUR SERVICES

Revolutionising the way we pick litter, Forbek litter pickers are expertly designed to use machine suction and robotic sorting to grade litter and organic material providing a safer, cleaner environment.

LITTER PICKING

ROBOTIC SORTING

POWERFUL SUCTION

ADVANCED VISION

ADVANTAGES

- ◆ Advanced vision systems, sensors and robotic sorting returning organic material to the verge.
- ◆ Self-contained high-visibility machine operates seamlessly within traffic regulations.
- ◆ Versatile 7.2m arm and powerful suction head for complex reach in a single pass.
- ◆ Efficient, low emission Euro 6 engines running on HVO.
- ◆ Fast picking, extensive litter capacity and mechanical emptying of litter from machine.
- ◆ Automating litter picking into a one-person operation with reduced risk of accidents.

SUSTAINABILITY

Sustainably driven, Forbek litter pickers robotically sort between litter and organic material and remove harmful toxins from the environment. We prevent litter from impacting drainage systems, wildlife and leeching into the environment through grass and mowing equipment.

HEALTH & SAFETY

Forbek machinery automates the litter picking process with a single operator and eliminates the need for workers to pick litter on busy road verges and motorway medians, causing potential hazards. Our machine enhances cleanliness and reduces the risk of accidents caused by debris and road litter.

CONTACT US

By leveraging our robotic litter picking technology, we are creating a healthier, safer, and more sustainable future for our communities.
