

Automated inspection in rough waters

TETHYS ONE

The world's most advanced compact solution for automated investigations in strong currents and turbid waters.

CONTACT US →

Tethys ONE is a robust hybrid ROV / AUV and the tool for fast data acquisition & surveillance missions, ensuring secure structures, waterways and nation.

- + Automated area scanning & structure scans
- + Versatile robot with humanitarian neutralization systems: Vulcan, Viper, metal detector, grabber
- + Self-sufficient operation with hot swappable batteries (~10sec to swap)
- + Acoustic live 3D mapping & obstacle awareness

Its omnidirectional maneuver capability allowing stationary operation in strong currents and poor visibility to boost the investigation efficiency.

- + Fast deployment from any height in just 10 min
- + Position tracking with high accuracy (up to 0.1m)
- + Intuitive control with Tethys Control Software
- + Work in confined spaces with compact system
- + Reliable and accurate recordings
- + Easy-to-use interface for any operator
