

MIXED  
REALITY  
SIMULATOR

# About BlueRoom

BlueRoom is a sovereign Australian innovation delivering the world's first commercially deployed Mixed Reality (MR) medical simulator. Designed and built in Melbourne, it provides immersive, hands-on training with real equipment inside realistic virtual environments.

Now in service worldwide, BlueRoom enables teams to train anytime, anywhere without reliance on live aircraft, combat zones, or other hard-to-access environments.

The system features a cutting-edge Mission Control dashboard and integrated biometrics that track stress levels in real time. A powerful debriefing suite allows instructors to monitor progress, assess performance, and measure improvement across every training session.
