

Dalfin AI

Company Overview

Dalfin AI is a sovereign Australian platform that redefines how defence software is created. Any defence system, from battlefield logistics to command dashboards, can be built in minutes simply by describing the requirement in natural language, speaking it aloud, or uploading screenshots. No coding, no dependency, and no delay.

Designed for mission critical environments, Dalfin combines AI automation, no code creation, and quantum ready workflows into one powerful platform. It enables military teams, planners, analysts, and field personnel to build and deploy secure digital systems without relying on developers or third party vendors.

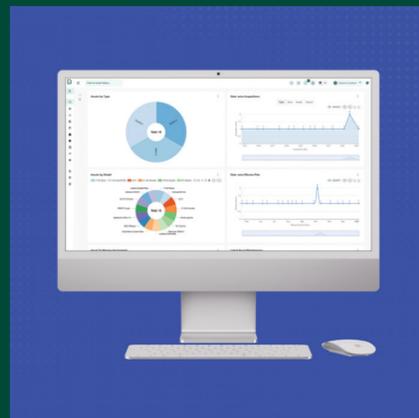

Dalfin operates in multilingual, secure, and disconnected environments. It is already live across Southeast Asia and the Middle East. Headquartered in Perth, Western Australia, with export clearance and local support in key regions, Dalfin AI is delivering Australian innovation at global scale; bringing faster, smarter, and sovereign software to the frontlines of modern defence.

Products

- Dalfin AI platform for secure software creation in Defence and government
- Build any defence system using natural language, voice input, or screenshots
- AI powered automation for workflows, analytics, and reporting
- Quantum ready workflows for optimisation, simulation, and secure operations
- Supports C5ISR, command and control, logistics, training, and cyber operations
- Works on mobile, web, and desktop environments
- On premise or cloud based deployment with multilingual and offline capability
- Includes visual dashboards, AutoML, and business intelligence tools
- Integrates with legacy systems, databases, and external APIs
- Converts documents and images into live systems using agentic workflows
- Full offline documentation, user training, and responsive support

Availability and Support

- Commercially available for cloud, on premise, and sovereign deployments
- Production ready with AI core and modular components
- Defence systems can be built in minutes with full customisation in two to three days
- Offline documentation, training videos, and interactive learning centre included
- Multilingual support for both input and interface
- Fully compatible with air gapped networks and secure data environments
- Dedicated local support teams
- Willing to co-develop solutions with defence contractors and agencies
- Support for continuous updates without disrupting mission operations

Discriminators

- Any defence software system can be built by simply describing the requirement using text, voice, or images
- First platform globally to combine no-code, AI automation, and quantum workflows in one secure environment
- Leading sovereign no code AI platform across ASEAN for government and national infrastructure projects
- Built for mission critical operations including C5ISR, logistics, and cyber resilience
- Applications are created in minutes and can go into production within days
- Operates securely in air-gapped, offline, and on-premise environments
- Empowers non-technical users to build and customise systems without coding or developer support
- Multilingual interface and voice input support diverse field conditions
- Supporting early-stage pilots and digital readiness programs with government and enterprise partners across the Indo Pacific
- Quantum workflows enable logistics optimisation, battlefield simulation, and secure communication scenarios along with secure defence systems; recognised by leading academics

Key Customers

- Confidios
- Bodicott
- Iloilo Smart City
- Universities
- Government Agencies
- PT. Mitra Petani Indonesia

Key Partnerships

- NVIDIA
- AWS
- Google
- Microsoft
- Austrade (Australia)
- Invest and Trade WA (Australia)
- BED Global Holdings (Philippines)
- Advintek Global (Asia Pacific)

Quality Accreditations and Awards

- Selected for Petronas FutureTech 4.0; top 20 out of 400 global companies
- Showcased at Indo Defence 2025, AUSA 2025 and Defence Trade Mission India
- Global recognition via NVIDIA Inception, Microsoft Founders Hub, Google for Startups and AWS Activate
- Delegate in 6 Austrade led international missions across Southeast Asia
- ISO 27001 Certification process underway
